ETHERNET INTERFACE CONTROL FOR WIRED NETWORKS

Part No: YE-ETH-WIFI
Details

Operation Energy Source Electric (12/24 vdc)

ETHERNET INTERFACE CONTROL FOR WIRED NETWORKS
Same as above except for use with standard wireless Ethernet networks.

Weight: 1.500 lbs (kg)

PRODUCT SERIES OVERVIEW

- TFT RC monitor accessories and components are for use with Tornado RC, Hurricane RC, Typhoon RC and Monsoon RC and allow control of the monitors from remote locations.
- The Panel Mount, Tethered and Wireless Operator Stations have a waterproof membrane switch to control vertical, horizontal, and nozzle patterns as well as the programmable PARK and Oscillate functions. Power, PARK and Oscillate indicator lights are standard. Two Auxiliary buttons are included and require the Remote Auxiliary Function Relay, Extend-A-Gun RC interface, or valve interface box to control lights, Extend-A-Gun RC, valve actuators, or other equipment.
- All operator stations are equipped with "last button pressed" software so any button presses from the operator station will take over control from any other operator station. These operator stations can also be configured, by an internal DIP switch, as a "Master" control station so that commands from the operator station cannot be overridden.
